

ABSTRACT OF THE DISCLOSURE

A dental tool apparatus has a case and a first cleaning tool pivotally mounted in the case so as to be movable between a first position within the case to a second position extending outwardly of the case. The first cleaning tool is a toothbrush that has bristles extending outwardly therefrom transverse to the longitudinal axis of the case when the toothbrush is in the first position. A second cleaning tool and a third cleaning are also pivotally mounted within the case. A closure member is pivotally connected to the case so as to be movable between a covering position and an open position.
